The Precast Concrete Association of Virginia is dedicated to the growth of the precast concrete industry. We pursue that purpose by education and partnering with specifiers, installers, and end users on the advantages and proper utilization of our products and systems. The association will represent its members in the Commonwealth of Virginia.

Each time I start writing a PCAV President’s Message, I think about our mission statement and whether or not we are fulfilling the directives of our Association.

PCAV continues to serve as a single voice for the precast industry in Virginia. Our cultivation of a successful Association and solid relationships with VDOT and other industry partners has produced important programs such as the quality assurance/quality control program and concrete pipe and precast product education and promotion throughout Virginia and its contiguous states. State and national association education programs, regional and local outreach, and opportunities to provide important training and technical information to industry have also been part of our platform.

Over almost 30 years our active membership of producers and associates have provided educational opportunities for owners, specifiers, installers and engineering students on the durability, ease and efficiency of our products and on new technology and product developments in the precast industry. PCAV’s annual promotional programs continue to increase our visibility and promote the use of concrete pipe and precast products. Outreach efforts are complemented by our website and bi-annual issues of the HardFacts newsletter.

The addition of Industry Week in Fall 2015 and a Legislative Day during the 2016 General Assembly will allow PCAV to invite local and state decision makers into our plants to better understand the precast industry and the economic impact in our respective regions across the Commonwealth. Continued communication and alliance with national associations, meetings with VDOT and other state agencies and continued collaboration with our highly-valued Associate members will round out a busy year.

I thank all of you for your participation, support and volunteer efforts on behalf of the Precast Concrete Association of Virginia. Special thanks to those individuals always “on call” for the association - whether as committee chairs, past presidents, officers or “booth staffers”. You provide the grease for the wheels of the association - without your time and professionalism, we would not accomplish what we do or be as effective as we are in achieving the goals of our mission.
Fresh off another successful annual conference, the PCAV has much to celebrate. This year’s annual gathering was a big success featuring important industry speakers, associate and producer member meetings, and plenty of networking time in between it all. Darrell Wilson meticulously ran the opening golf event at the always-challenging Devil’s Knob course. And Marie Derby, Gus Ward, and Willie Clark took charge of the rest of the conference activities. Members heard from VDOT Chief Engineer Garrett Moore, and had face time with the Head of the Materials Division and numerous other VDOT staff in attendance. Outgoing PCAV President Willie Clark was presented with a plaque for his service to the organization, and incoming President Mimi Coles offered her vision for the next twelve months.

That vision includes many important and substantive issues that will need to be addressed. Plans for 2015 include declaring a week later this year as “Precast Concrete Industry Week” and opening up producer plants to guests, legislators and others in order to better inform the public, regulators, and politicians about the important economic impact the industry makes in Virginia. Follow-up plans include scheduling a “Legislator’s Day” event at the 2016 General Assembly to provide an opportunity for members to visit with state legislators in furtherance of this goal. (It’s well worth noting that the PCAV scored a major legislative victory at the 2015 session by defeating two budget amendments that would have superseded VDOT’s authority to make engineering-based decisions with regard to pipe selection criteria.) And of course the PCAV will continue to sing the praise of precast pipe and structures at numerous industry events and trade shows throughout the year, sweetening our presentation by shortly purchasing a new and refreshed trade-show booth.

The PCAV also hosted the first of two 2015 joint meeting with VDOT in mid-March. These half-day events allow for an open exchange of ideas and information and continue to provide value to both parties. In this latest meeting VDOT indicated that they are considering updating the current QA/QC requirements for precasters and after discussion it was agreed that the PCAV would form a joint task force to assist VDOT in formulating these revisions. One meeting on this subject has already been held, another is scheduled for early June. PCAV takes great pride in our relationship with VDOT, and being asked to work jointly with them on this important subject is a good indicator of the value that it offers. A major topic for the next joint meeting, scheduled for September 16th, will be the acceptance of projects into the VDOT system.

PCAV, in conjunction with ACPA’s regional field representative, Walt Catlett, continues to offer industry-related training to VDOT and others around the state. Topics include proper aggregate compaction, post-installation inspections, and culvert inlet protection as it relates to sediment control. Attendance at these sessions continues to grow and that spells success in terms of the PCAV’s primary mission - to promote precast products.

The PCAV has also launched a new effort to actively solicit and promote sponsorships from members to assist in keeping the PCAV budget out of the red. Members are beginning to step up and the PCAV Board of Directors would like to recognize and thank all the sponsors of the March VDOT Joint Meeting and the Annual Meeting. (Please see page 3 for the full list of sponsors).
Thank You to PCAV’s Annual Meeting and Golf Sponsors:

NPCC

Press-Seal
Overcast and a bit chilly, but that didn’t stop the PCAV’s golfers from having a great day of golfing and networking on the Devil’s Knob course in Wintergreen, VA. Darrell Wilson, of Boral, not only serves as the golf chair, but as an integral member of the Meeting Committee. Thank you Darrell for another great golf outing!

Thank you to all the golf hole sponsors (listed on page 3 of this newsletter). Without all the generous support of PCAV member companies, these outings would not be possible! If you did not participate this year, please plan on joining everyone on the golf course in 2016! You won’t want to miss out!

Annual Meeting attendees enjoying the opening reception

Garrett Moore, VDOT Chief Engineer, addressing the meeting
Rising land values are driving detention ponds underground. Consider the design and construction of the McLearen Academy in Herndon, Virginia for instance. Regulations require attenuation of stormwater flows and ponds are traditionally used where sufficient land is available for this use. At this project site about a mile from Dulles International Airport, a better solution is an underground water detention so the land above can be put to good use as well. At one location on this project the land above a precast detention system with a 2.65 acre-ft capacity (nearly 864,000 gallons) will accommodate a sports field.

The Salem, Virginia facility of Concrete Pipe & Precast produced 112 high quality pieces of 10’ x 8’ double cell structural units similar to those used for culverts. Each of the standard pieces weighed 24.8 tons and the special end pieces weighed 31.7 tons, so handling and delivery, carried out in only 12 days, had to be carefully controlled. Precise dimension control of such large units is very difficult but the challenge was met by the experienced and highly skilled workmen at Salem.

W.B. Hopke of Alexandria, Virginia did an exceptional job of setting these units side by side to form a quad-cell underground detention system. They created an efficient operation by excavating and grading the bedding in advance and with careful use of two large cranes. Flow equalization was accomplished with an array of openings which had to be precisely lined up and the flow controlled with a weir and orifice arrangement. Hopke’s first class planning and execution made short work of the difficult installation.

Installation of the Storm Pass Detention System at 20% completion

PROJECT INFORMATION:

Owner: McLearen Academy; Herndon, Virginia
Engineer: Urban Engineers; Philadelphia, PA
General Contractor: Clark Construction Group; Bethesda, MD
Sitework Contractor: W.B. Hopke; Alexandria, VA
Precast Manufacturer: Concrete Pipe & Precast; Salem, VA
Precast Detention System: 365 Ft - Quad 10’ x 8’ Sections

Join Governor McAuliffe and Transportation Secretary Layne as the 2015 Governor’s Transportation kicks off Wednesday, October 28th and concludes Friday October 30th in Virginia Beach.

Vibrant communities are built around thriving business centers with affordable, convenient transportation options. New transportation projects and improvements provide the impetus for lively economic development and community growth and nowhere is this clearer than across Virginia. Join transportation leaders from around the commonwealth and the U.S., October 28th - 30th, for a discussion of current issues and the solutions necessary to drive Virginia’s economy forward.
